

EDUCATION

- Zhejiang University**
B.Eng. in Computer Science & Technology; GPA: 4.7/5.0 (93/100)

Zhejiang, China

Sep. 2023 – Present

HONORS AND AWARDS

COMPETITIVE PROGRAMMING

- ICPC Asia East Continent Final (EC-Final) — Gold Medal, 3rd Place**
Awarded top 3 nationwide that season, out of 4539 participating teams across all regionals.
Earned 11 Gold Medals at ICPC & CCPC Regionals during 2023–2025, including the following top-3 finishes:
 - ICPC Regional, Hefei Site — Gold Medal, 2nd Place**
 - ICPC Regional, Nanjing Site — Gold Medal, 3rd Place**
 - CCPC Regional, Qinhuangdao Site — Gold Medal, 3rd Place**

Dec. 2024

Nov. 2023

Nov. 2023

Oct. 2023

SCHOLARSHIPS

- CCF Elite Collegiate Award**
Awarded to nationwide top 99 undergraduate students in China.
 - He Zhijun Education Fund Scholarship**
Awarded as the sole recipient in his grade at Zhejiang University.

Aug. 2025

Oct. 2025

PUBLICATIONS

- Evaluating Parameter Efficient Methods for RLVR**
Qingyu Yin, Yulun Wu*, Zhennan Shen*, Sunbowen Li, Zhilin Wang, Yanshu Li, Chak Tou Leong, Jiale Kang, Jinjin Gu*
ICML 2026. [arxiv]
 - P1: Mastering Physics Olympiads with Reinforcement Learning (Technical Report)**
Jiacheng Chen, Qianjia Cheng*, Fangchen Yu*, et al. (incl. Yulun Wu)*
arXiv preprint. Work done during internship at Shanghai AI Lab. [arxiv]

EXPERIENCE

- UCSD Hao AI Lab**
Research Intern (onsite), advised by Prof. Hao Zhang
 - (Ongoing) Leading a project on optimizing communication overhead of data parallelism for training tasks of LLM reinforcement learning scenarios.
 - Extended parallel speculative decoding (e.g., DFlash) to support tree drafting via causal attention masking.
 - Shanghai AI Lab**
Research Intern
 - Led an independent research project investigating agentic memory training via reinforcement learning, exploring how context engineering can enhance LLMs’ long-horizon reasoning capabilities.
 - Contributed to the reinforcement learning training of a physics olympiad LLM (see P1 below).

San Diego, CA, USA

Shanghai, China

03/2026 – Present

07/2025 – 11/2025

RESEARCH INTERESTS

With a strong background in algorithm design from **competitive programming**, I am broadly interested in **large language models**, particularly research at the intersection of the two, where **algorithmic innovation** plays a central role. My current interests include, but are not limited to:

- LLM Efficiency:** How to design algorithms that make LLMs more capable and efficient across diverse real-world settings, such as speculative decoding and efficient RL training.
- Agentic Evolution:** How to evolve agent capabilities through reinforcement learning, agentic memory, and related techniques, toward the level of top competitive programmers.

SKILLS

- Competitive Programming:** Rating 2754 on Codeforces (International Grandmaster); ICPC team captain.
 - Research Frameworks:** LLM post-training pipeline (veRL, slime); SpecForge; diffusers.
 - Software Engineering:** Python, C++, TypeScript, Docker, Shell, $\text{\LaTeX}$; open-source contributor since middle school.
